Playing Chess, Cricket, Kabbadi,  
Drawing, Cycling, Dancing

## EXPERIENCE

*WorldLine Global Services | Software Developer | May 2023 – January 2024*

### Fraud Case Management (FCM)

FCM is the product of worldline which is used by all European banks and worldwide to manage frauds are happening in the banking system. Production/UAT/DEV support, enhancement and database indexes are created. Account based payment(ABP) is one of the sub module, where all development starts from scratch.

*Ernest & Young |Senior Consultant | October 2021 – April 2023*

### Travel and lifestyle services (TLS) - American Express

Working as JAVA backend developer. The application is used by end users across all over the world which helps user to book hotels, flights, cruise etc. There are multiple service is used on which I am working to enhance or fix the production issues.

*Wipro |Software Developer | July 2019 - October 2021*

### Application owner of Cashplus, EDIS and ESOFTEX - ICICI bank

These are the various application used by internally in ICICI bank as well as clients of the bank. I am working with vendor to resolve the issues raised by ICICI bank users and clients.

### ICICI bank Travel card

This is integration of all subsystems of previous ICICI bank's forex card into new integrated single system. Worked on distributed environment with load balancing approach.

*Infosys | Senior System Engineer | January 2017 – June 2019*

### Nucleus Migration - Deutsche Bank

This project includes many parts including Batch migration, AV migration, database migration, weblogic to JBoss migration on cloud and physical to unix RHEL migration. Tech stack: Shell script, SQL, Oracle, git etc.

### Web Application Development - Deutsche Bank

In this project we have converted java based desktop application to web application which helps to automates the testing process by generating multiple reports.

### InfyRetail Application

This application allows its users to login, view the top customers by admin, filter top 10 based on customer type, upgrade/downgrade customer bands based on spending.

### PyFood Application

It is an application aimed at viewing, selecting and booking of restaurants. The application allows its admin to login, view the available restaurants, book the restaurants and make the payment.
