PROJECT DESCRIPTION :

Project : Web Application. (Secondary Packaging Department Management Application.)

Role : Java Backend Developer

Client : Coromandel International

Technologies : Java, Spring Boot, Hibernate, Maven , Git, Postman

The primary focus of the project was to migrate the existing standalone application to a web-based platform. This transformation involved leveraging Spring Boot, a powerful Java-based framework, to design and develop RESTful web services for different modules of the application. These modules encompassed various aspects of the Secondary Packaging Department, including inventory management, production tracking, order processing, and quality control.

ROLES AND RESPONSIBILITIES :

- Analysis the requirement, coding, testing and Bug Fixing etc.
- Producing the Restful web service.
- Develop and maintain the back-end-server.
- Write clean, maintainable and efficient code.
- Test and debug new applications and updates.
- Perform the manual testing.
- Analyze the program to identify the code changes as per business requirements.
- Working as team member.
- Maintain up-to-date code documentation.
- Involved in knowledge-sharing activities in the team.

DECLARATION :

I, hereby declare that the above-mentioned information is correct up to my knowledge and I bear the responsibility for the correctness of the above-mentioned particulars.

Place : Mumbai
