Mumbai

project 1: - Ownadx

- Ownadx is an exchange that serves as an endpoint from SSP to DSP, providing SSPs an opportunity to earn money by adding their pages to display advertising. DSP, on the other hand, functions as a demand-side entity that provides ads to be shown on pages.
- Ownadx facilitates the mapping of DSP to SSP, managing the demand-to-supply relationship based on selected criteria to display ads on websites.
- It offers a platform for suppliers to showcase their ads and engages with advertisers in the advertising.

Responsibility :-

- Handling API response and request times.
- Managing the mapping of DSP and SSP based on selected criteria.
- Overseeing seat management, SSP creation, DSP creation, and displaying lists of DSPs and SSPs within a specified response time.
- Managing all login activities based on selected seats.
- Handling the cron job for sending notifications to specific seats.
- Handling User Interface of project

Project2 :-Bi-Report

- Bi-Reports manage the activity reports of all platforms within the Ownadx projects. These reports encompass data such as received requests, received responses, and the total earnings of a particular seat.
- Show the data based on selected seat and show revenue of particular seat wise.

Responsibility :-

- Bi-Reports manage all login activities based on authentication token keys to oversee and display data.
- Showing reports on a particular login, including fetching data from another API and presenting reports based on filters.
- Handling both backend and frontend aspects to display and fetch data from server details of the Ownadx project.

College Project:-

project Name: Transport Application

- Transport Application there are user and business login to manage activity of login.
- Transport Application to book vehicle as per your requirement at your door step and see all charges and all things.
- Transport Application see all transport which is register and see review of that transport.
